Video Shooter: Storytelling With DV, HD, And HDV Cameras; DV Expert Series

Synopsis

Video Shooter is a guide to both the mechanics of the video camera and the craft of shooting. Written by a veteran in the industry and utilizing an engaging, conversational style (including illustrative anecdotes from the author's many years of experience), the book takes the reader beyond "button pushing" to teach the complete range of skills required to capture compelling images. Topics include equipment selection, camera setup and operation, shooting techniques, and working with lighting and audio. Although the techniques illustrated in Video Shooter are appropriate for users of a wide range of camera models, the book focuses on the most popular 3-CCD DV and HDV cameras. A chapter on issues and techniques relating to DVD output makes the book especially suitable for industrial, educational, and government video producers. The book also features a companion DVD with tutorials, footage demonstrating storytelling techniques, and technical matter such as a comparison of various filters.

Book Information

Series: DV Expert Series

Paperback: 272 pages

Publisher: Focal Press; 1 edition (January 15, 2006)

Language: English

ISBN-10: 1578202892

ISBN-13: 978-1578202898

Product Dimensions: 9.2 x 7.5 x 0.6 inches

Shipping Weight: 1.5 pounds

Average Customer Review: 4.2 out of 5 stars [See all reviews](#) (33 customer reviews)

Customer Reviews

To give you a hint of the level of this book, the first sentence on the back cover reads: 'It's now possible to make a high-quality movie or television program using a camera that costs under \$5,000. While the book then says it's aimed at the Novice to Intermediate user, a \$5,000 camera sorta says to me that this isn't a complete beginner who got a camera for Christmas. Inside the book is relatively little about the camera. Instead the book is about shooting video. It's lighting, framing,

capturing the action that's important. He talks about features of the camera, but from a sense of what that feature means to the shooter, it's not a 'camera a has this, camera b has that.' Mr. Braverman, above all emphasizes that the idea in shooting video is to tell a story. Much of his commentary goes beyond the technical details into how to capture the story. He talks about what the camera sees, and relates this to what the audience gets from the story. Here are the tricks of the trade from a master.

Barry Braverman brought me back to the days when the lust object of every aspiring filmmaker was their own Arriflex, Eclair, Beaulieu or Bolex. Braverman pines for those days, in a way, when he writes: "I hate DV [Digital Video]. I hate everything about it . . . Today I'm no longer that special [film] person as almost anyone can afford a decent camera and be a Video Shooter . . . " and he adds "[t]he issue now is who owns the storytelling craft - and that is a much tougher commodity to come by." And with those opening words Braverman launches into a thorough exploration of both traditional filmmaking and digital video. It's literally a pair of high level courses in a single book and it is exceptionally well done. Braverman knows film. Braverman knows digital video. Braverman knows the differences between the two. And Braverman knows not only how to tell a story in film or video, but how to write about it. For anyone contemplating any serious work in video, this book is a must-have. Those aspiring to a career in video absolutely need it. But Braverman's book is equally useful to the serious hobbyist as well. The book is lavishly illustrated with lots of how-to and "why you shouldn't" pictures. The writing is concise and natural, without any pretense toward preachiness. Braverman is very adept at mixing the very technical with explaining the art of visual storytelling. Lighting, camera selection sound, operation and shooting techniques. He covers it all. (I really do hope that Braverman authors a new edition every year or so just to keep apace of the changes in the technology.) The man himself is worth the price of admission. Definitely a book anyone with an interest in telling stories through video will want to have. Jerry

This book far exceeded my expectations, even after reading all the five star reviews. The text is both engaging and informative - a rare combination for what might be termed a "how-to" type book. Braverman's book actually stands as an interesting read aside from the technical and artistic information it imparts. His style is refreshingly candid and his guidance practical. Braverman provides an overview of all the fundamentals necessary to maximizing the quality of DV and HDV productions, including issues related to the equally critical areas of compression and burning to DVD. There are certain limitations inherent in the DV and HDV format, including excessive depth of

field and a propensity to burn out detail in high light situations. Braverman helps the video shooter address and compensate for those deficiencies - even where the productions are limited to shooting video of the family. After all, if video isn't well shot, it's not going to be watched. Looking forward to Braverman's next book.

The subtitle of this book is *Storytelling with DV, HD, and HDV Cameras*. What I saw, when I read that, was the word *Storytelling*. I thought it would be a book about how to tell a story with images and sound to get across a "message". I should have read further along the sentence. This book is not about storytelling. It's about DV, HD, and HDV Cameras and their supporting equipment. The book is aimed at amateur videographers who have aspirations of turning professional and think that professional equipment will make that happen. And who have a 5 or 6 figure bank account. There are equipment recommendations on all sorts of things that make a professional shoot. All of the equipment ranges from slightly expensive to horrifically expensive. Of course this tight focus on the latest equipment means that the book will soon be out of date. If you need some equipment, have a healthy bank account, and want to buy now, this book is a good choice. If you want to learn how to tell a story with video, keep looking.

I work for a film studio in Los Angeles and while I am not a production person per se, part of my job is to have an understanding of the production and post production worlds. Barry Braverman's book helps me to make sense of an industry based on technology that changes so fast it can make your head spin. I would recommend this book, first to aspiring film makers. But this book goes to great lengths to take a lot of the mystery out of all the "tech speak", so I would also highly recommend it to anyone connected to the film industry in any form, from marketing to distribution.
